ABSTRACTED-PUB-NO: DE 10043896A

BASIC-ABSTRACT:

NOVELTY - Laser device comprises a semiconductor laser element emitting a first laser light of a first wavelength; and a surface-emitting semiconductor element which is excited by the first laser light and has a structure for controlling a spatial mode of a second laser light.

DETAILED DESCRIPTION - Preferred Features: The structure has a dimension which is 0.1-10 times as large as the diameter on which the second laser light is spread on one point of the structure. The semiconductor laser element has a first active layer made of a $\text{Inv}2\text{Ga}1\text{-v}2\text{N}$ material and a second active layer made of a $\text{Inv}1\text{Ga}1\text{-v}1\text{N}$ material (where $0 < v1 < v2 < 1$).

USE - As a semiconductor laser device.

ADVANTAGE - High speed modulation of the laser light is achieved.

CHOSEN-DRAWING: Dwg.0/12
